Plan Objectives

PanAbrasive's goal is to reduce the creation and release of Particulate Matter less than 10 microns (PM₁₀) Particulate Matter less than or equal to 2.5 Microns (PM_{2.5}), Manganese (and its compounds), hexachlorobenzene and dioxin and furan isomers where technically and economically feasible. Based on currently available information and technologies, there are no technically and economically reduction options currently available for these substances. The facility will continue to monitor technological advancements to ensure that reduction options that are both technological and financially viable are implemented at our facility. In terms of the metal species noted above, Panabrasive cannot reduce the use of these substances as they are integral components of the alloys produced by the facility. However, we will ensure the sound management and use of these substances that minimizes significant adverse impacts on human health and the environment.

Toxics Reduction Progress

Overall the quantities of dioxins, furans and hexachlorobenzene released and created by the facility decreased due to a slight decrease in the facility's overall production in 2016. The values of manganese used, contained in product and recycled also increased due to the slight decrease in production. Quantities of manganese shipped off-site for disposal increased in 2016 relative to 2015 due to an increase in the quantity of furnace slag shipped off-site for disposal from the slag storage pile located on-site. Quantities of PM10 and PM2.5 created and released to the air remain essentially unchanged from the previous reporting period

Plan Implementation Progress

There were no reduction options identified in any of the plans for the above noted substances that were identified as being both technically and economically feasible. As such, there were no timelines presented in the reduction plans for the above noted substances. However, Panabrasive will continue to explore and investigate potential reduction options as they arise as part of their sustainability program.

As there were no anticipated reductions noted in each of the plans for the toxic substances noted above, there were no reductions of any toxic substances during the reporting period that would be attributable to any reduction plan.

Certification Statement

As of May 21, 2017, I certify that I have read the reports on the toxic substance reduction plans for Manganese (and its compounds), PM10, PM2.5, Hexachlorobenzene, Polychlorinated Dibenzo-P-Dioxins & Polychlorinated Dibenzofurans and their 17 congeners and am familiar with their contents and to my knowledge the information contained in the reports is factually accurate and the reports comply with the Toxics Reduction Act, 2009 and Ontario Regulation 455/09 (General) made under the Act.
